

Mira Finance

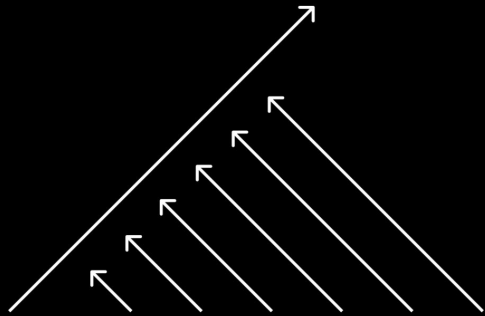

Building the next generation of crypto investing.

Investors want crypto exposure.

- In the last 5 years, the crypto market has gone from \$106B (July '17) to **\$854B** (Dec '22)
- Institutions and retail are showing interest, but there's still a long way to go, with only 4% global adoption.
- Regulation is coming. When it arrives, there will be a huge influx of investment using the easiest, simplest products.

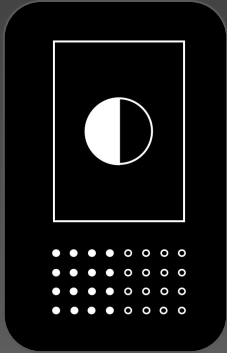

But getting started is **hard**.

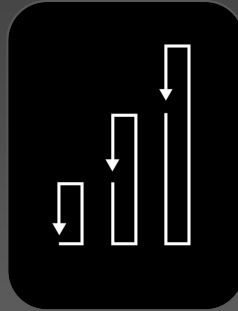

- On-chain interactions are too complicated for most investors.
- There are high costs to switching applications.
- Exchanges are losing trust.

Enter Mira: the three-step solution.

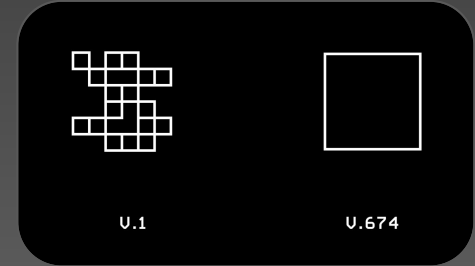

Index Funds

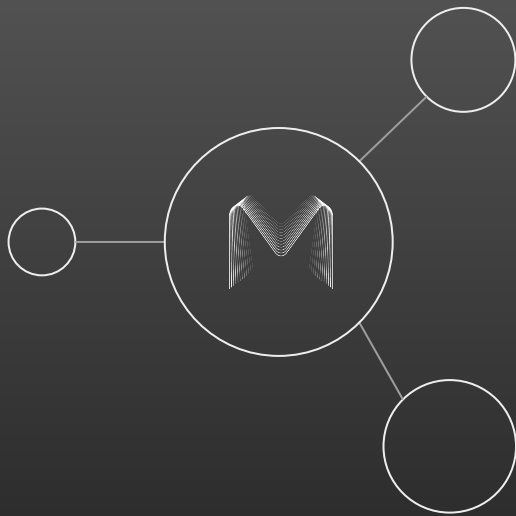

Investment
Management

DeFi Home

Step 1: the SPY500 of Crypto.

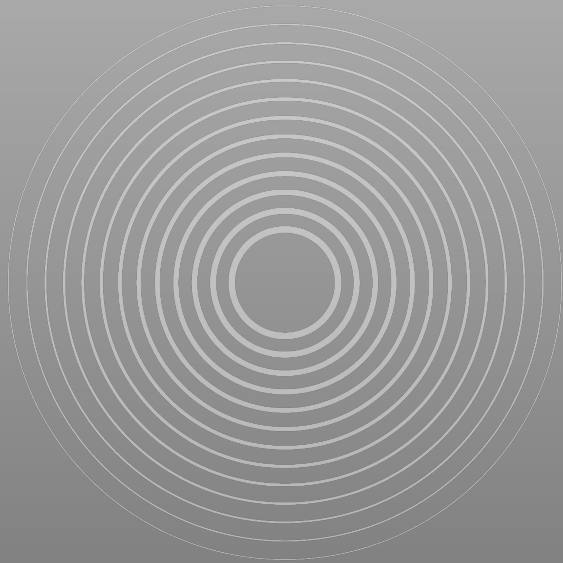

- Buying index funds is the easiest way to get exposure in one click.
- Mira Index Funds bundle projects like Layer 1's, DeFi, Wireless, Web3, and more.
- Funds are tokenized and listed on our platform and other exchanges.

Step 2: Investment Management.

☐ ☐ ☐ ☐

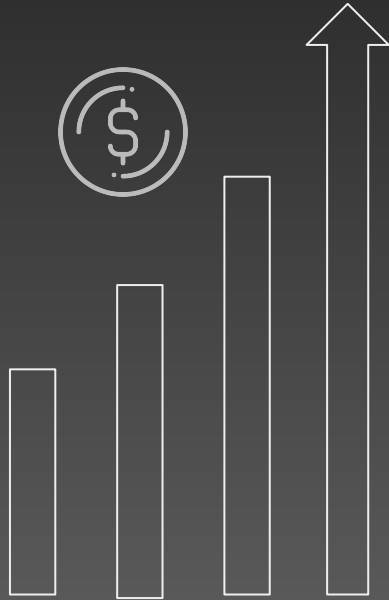

- Browse managers on the same platform where funds compete.
- Customize index funds with rebalancing, management fees, and whitelists.
- Leaderboards rank managers and funds by performance.

Step 3: A Home for Your Crypto Needs.

- Users want everything in one place.
- Fiat onramp, send and receive, stake, swap, join launchpads, and more.
- Forget about chains and gas fees.
- The simplest, full-featured abstraction layer.

How we profit:

On Launch:

- Management Fees
- Creation Fees
- Investment Fees

Down the Line:

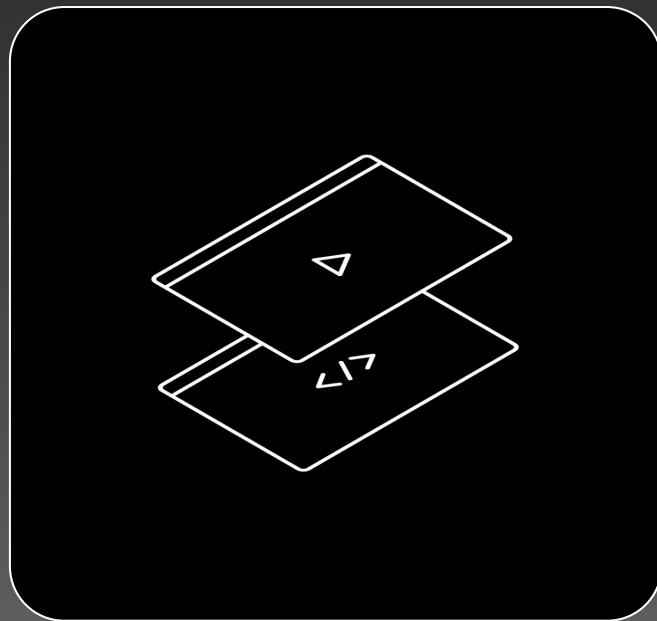

- Payment for order flow
- Staking fund assets

Others are trying, but they don't stack up.

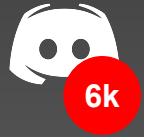

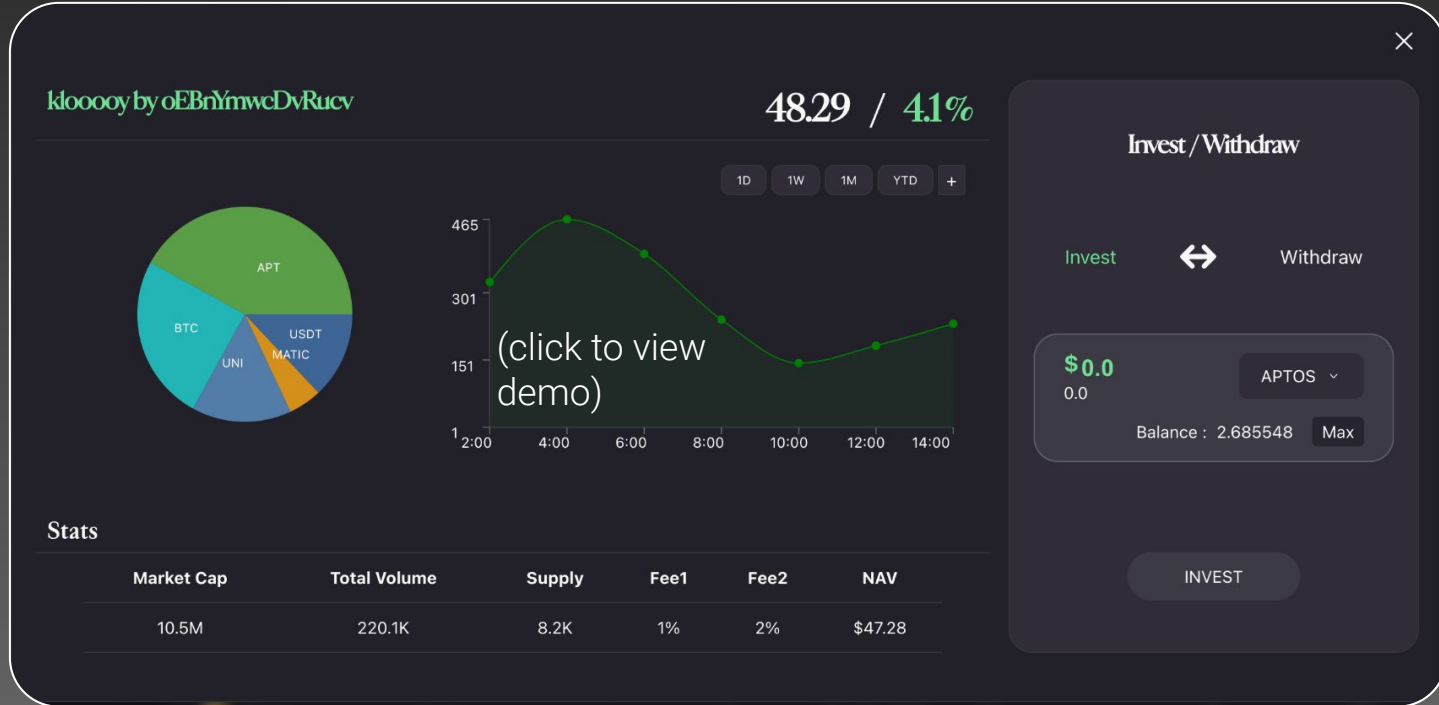

Competitor	Blockchain	Cross-chain index	Custom Index	DeFi On-ramp	TX Cost
Mira Finance	Aptos & Sui	✓	✓	✓	Low
Index Coop (DeFi Pulse)	ETH	✗	✗	✗	High
Arch Finance	ETH	✗	✗	✗	High
Hord Finance	ETH	✗	✓	✗	High

Our advantage: top down approach.

- Building our own infrastructure to support index fund products was a big challenge, but it comes with a lot of perks.
- We have complete programmability from the top down, making it easy to upgrade contracts for new user capabilities, product features, and plugging in other protocols like staking.

We've been building.

We're on a roll.

- We won xHack: a hackathon hosted by Wormhole and Jump Capital.
- We've made partnerships to extend our protocol with big players like LayerZero, Axelar, Pontem, Notifi, and more.

Meet our team.

Nirel Gershwind

Co-Founder/ CTO

Former Blockchain Researcher, SWE, and Investment Analyst - implemented a Merkle DAG Blockchain as a novel solution for mobile wireless sensor networks.

Andrew Capasso

Co-Founder/ CEO

Former Director of Internal Development at the American Blockchain Initiative - a lobbying firm educating US policymakers on cryptocurrency to improve regulatory clarity.

Alex Allaire

COO

Former Industry Affairs Associate at The Blockchain Association.

CEO of the American Blockchain Initiative.

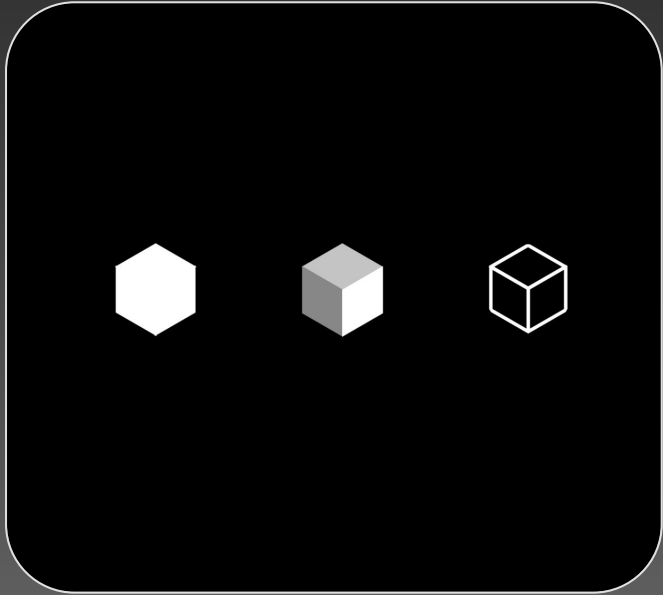

Florian Knollmann

CBO

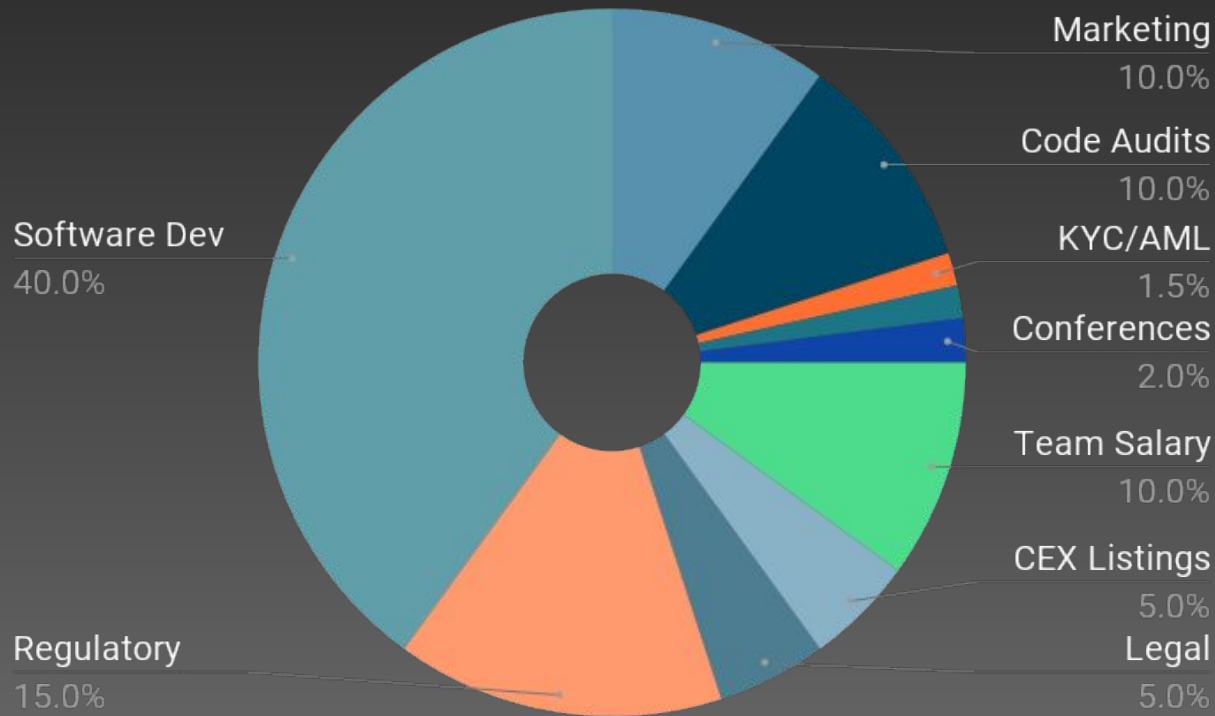

Former top performing sales specialist in the private sector.

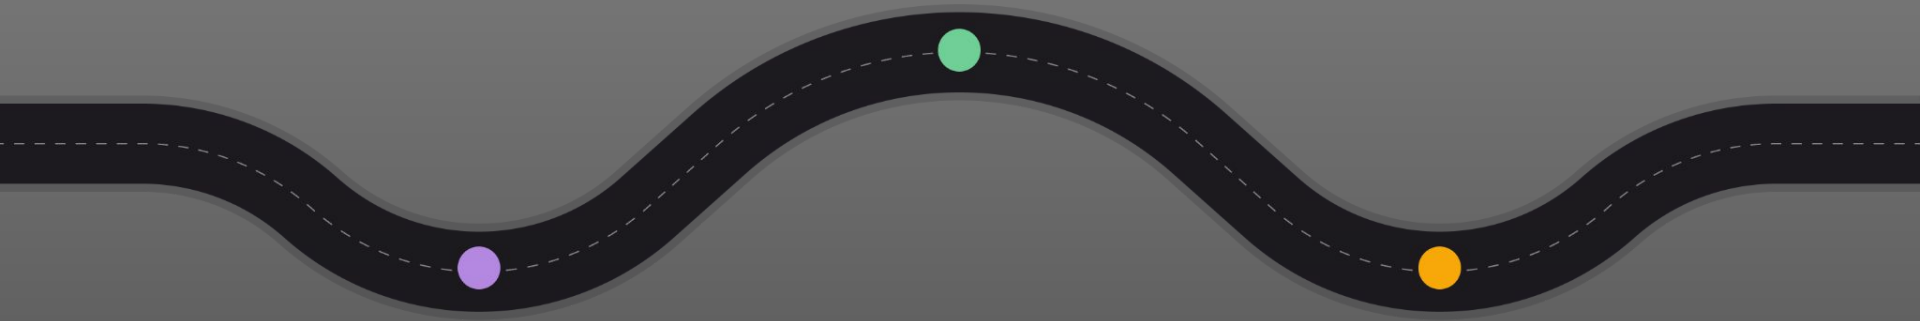

How we see the Future.

- Tokenized assets will proliferate - stocks, bonds, NFTs, Real Estate...
- Most valuables will be recorded on a blockchain.
- Asset aggregation is a huge challenge.
- We're the few who are preparing.

Our Deployment Plan.

Q1 2023

- Ottersec security audit
- DeFi sdk & widget integrations
- Compliance work
- Launch V1

Q2 2023

- Multi-wallet config
- Fiat on/off ramps
- Mobile app
- Referral rewards campaign

Q3 2023

- Treasury management
- Launch V2
- White-label for institutions
- Widen token assets
